FINAL-XVL

CCD DISPOSITION MEETING SUMMARY

I. General Information:

- A. PMN: P95-979/980/981
- B. Date: September 11, 1995
- C. Program Manager: Jim Alwood

II. Discussion:

At Focus a decision was made to issue a non-5(e) SNUR with a no release to water provision or exclusion for use as a solid. Upon notification of the Agency's decision, the company sent in supplementary information indicating that small amounts of release to water would be expected. CEB validated the data and concurred with the company's findings. As a result, the Program Manager recommended that the non-5(e) SNUR for P95-979/980/981 should have a water formula set at the COC.

III. Final Disposition and Rationale:

The meeting participants agreed with the Program Manager's recommendation to drop the no release to water provision and set a water formula at the COC if any releases should occur.

PART I: BACKGROUND DATA

Program Manager: Jim Alwood

Focus Decision: A non-5e SNUR requiring notice if the substance was released to water or used as a solid. (Notes attached).

After receiving notice from EPA concerning the SNUR the PMN submitter reviewed the manufacturing process. The submitter sent information to EPA that small but predictable amounts of the PMN substance will be released to water. CEB's review of this information concurs with this explanation. The submitter has suggested a SNUR with the water trigger rather than no releases to water.

PART II: RECOMMENDATION AND RATIONALE

The program manager recommends to continue to issue a non-5(e) SNUR requiring notice if water releases exceed the concern concentration using the water trigger.
